

Why CDMS is the Industry's Best

CDMS, formerly the E.I. DuPont de Nemours systems, has been on the market since 1982. Over the system's MORE THAN 25 year life span, it has grown, changed and developed into the most comprehensive system on the market today. While the development of other flooring software packages has been directed by a single flooring dealer, the development of CDMS is continuously directed by 23 Stock Holders who are also very large, highly profitable and successful flooring dealers. These 23 stock holders are very diverse. They include commercial dealers, Carpet One, Flooring America, multi-store independent retailers, wholesalers, small distributors, installation work rooms, and even a few single store retailers. This diversity means that CDMS isn't tailored to one person's method of running a small dealership, rather it has been built over the years to accommodate ALL types and sizes of dealerships with a strong focus on streamlined procedures, unlimited capacity, CPA-loved formal accounting, and a high volume of work accomplished just as easily over multiple-store locations as if all the work was done at a single location.

CDMS also does not require the expensive communication hardware and software that other flooring packages cannot not function without. For large and/or multi-store / company operations, CDMS delivers extreme efficiency and unlimited capability without the tremendous hardware expense required by other flooring systems.
